

# Sheet1

# of Clients	Average response time – 1000 requests ns	Client 1	Client 2	Client 3	Client 4	Client 5
1	1518332	1518332				
2	2433240.5	2608790	2257691			
3	4188316	4194463	4082387	4288098		
4	5506229.25	5145578	5445444	5852008	5581887	
5	6606085	6542698	6726624	6661765	6525636	6573702

Clearly, with the increase of clients the average response time to each client increases drastically. This is mostly likely caused by the synchronization of updates to the registry data structure, which is necessary to prevent synchronization problems.
